

SYSTEMS AND METHODS FOR DOCUMENTING HOME CARE SERVICES

ABSTRACT OF THE DISCLOSURE

The invention is directed to systems and methods for documenting home care services for providing reimbursement in the situation where a claimant has a relationship with a servicing
5 entity. In particular, the invention relates to the situation where a claimant is being cared for by a caregiver. The method may comprise a caregiver entering the home of a claimant; the caregiver interfacing with a data input portion, which is disposed in the home of the claimant, prior to providing a service to the claimant so as to input a first data set into the data input portion; the caregiver providing the service to the claimant; upon completion of the service, the caregiver
10 again interfacing with the data input portion to identify completion of the service, the first data set constituting collected data; and transmitting the collected data to the servicing entity.
